Fx125 TLB and Fx125 Qtv

The 10- to 15-ton carrier range with two unique configurations makes this mid-size hammer the perfect choice for backhoes and mini-excavators. Designed to handle larger, more demanding tasks, the Fx125 is perfectly suited for use on roads, bridges, rock, utility applications and mounted on pedestal systems for breaking oversize material in quarries.

Like the other hammers in the Fx family, the 125 offers improved durability with features that include a square, mono-block body for superior strength and a replaceable cylinder liner for reduced maintenance. Plus, the elimination of thru-bolts has proven to significantly lower downtime and failure.

The TLB version incorporates the patented Switch Hitch mounting feature, making it quickly adaptable to most rubber-tired backhoes. An indexing disc inserted in the side plate can be easily changed to accommodate quick-couplers for many popular backhoes, including Case, John Deere and Caterpillar®. Attachment is as simple as rotating the disc to the OEM center-dimensions of the carrier, and attaching the hammer in the normal manner. There is no need for separate or OEM-specific mounting brackets for each carrier. The off-set design of the TLB also increases “tuck” for better over-the-road transport, allowing for safer loading and unloading of the equipment.

The Qtv version is designed to work with larger mini-excavators and in noise-sensitive environments. Carriers equipped with quick-couplers may take advantage of the same floating top-mount boss mounting system as those supplied with our larger hammers.

All hammers come complete with the exclusive Pro-Pak for ease of installation. The Pro-Pak includes both hose whips, mounting hardware, a standard working steel, a tool kit and operating manual at no additional charge.

Features and Benefits:

- Increased hydraulic flow range for use on a wide carrier range
- Mono-block design eliminates a separate cylinder, fronthead and thru-bolts
- Improved dust intake prevention system increases reliability
- Replaceable cylinder liner with concentric porting keeps piston aligned for maximum impact performance
- Improved valve design reduces hydraulic fluid temperatures, increasing performance
- Square body design for superior strength
- 3-point sealing system prevents internal contamination
- Redesigned piston increases surface contact to working steel
- TLB configuration suits rubber-tired backhoe applications
- Qtv cradle for improved protection, sound suppression and dampening
- Improved dampening system within the cradle keeps breaker properly secure to reduce wear
- Increased and improved lubrication on critical components
- Longer thrust bushing for increased internal alignment insures direct impact with piston
INNOVATIVE TECHNOLOGY THAT MAKES A DIFFERENCE

- Higher backhead pressure for improved performance
- Square body, mono-block design for superior strength, eliminates a separate cylinder, fronthead and through-bolts
- New valve design reduces hydraulic fluid temperatures which increases performance
- Redesigned piston increases surface contact to working steel
- Advanced lubrication system evenly distributes grease to thrust bushing, front bushing and rod pins
- Replaceable cylinder liner with concentric cylinder porting keeps piston aligned for maximum impact performance
- 3-point Patent Pending dust intake prevention system incorporates grooves to trap contaminants on the upstroke and expel them on the piston down stroke, cushion ring acts as a secondary trap, improved external sealing minimizes dust intake
- Increased bushing surface keeps working steel aligned for greater impact and is replaceable without disassembly

**IMPACT ENERGY CLASS**

<table>

| Length in inches (mm)* | 77 (1,956) | 94.25 (2,394) |

| Diameter in inches (mm) | 4.33 (110) |
| New length measured from fronthead in inches (mm) | 26.75 (680) |
| Replaceable length measured from fronthead in inches (mm) | 15.94 (405) |

**General Specifications**

- Adjustable BPM: 400 – 650
- Acceptable GPM Range (LPM): 18.5 – 31.5
- Acceptable PSI Range: 2,320 – 2,610
- 85 dB(A) Qt version @: N/A
- Recommended Carrier Range in U.S. tons (metric tons): 10 – 15 (9 – 13.5)

*NOTE: Total weight and total length include standard working steel and universal top cap (with a Qtv configuration), less mounting pins and bushings.
